December 15, 2022

To Whom It May Concern:

Today I examined the eight horses that are stabled at Barren River State Park. All were found to be in good physical condition with no signs of disease or defects. Two of the horses have less body condition than the others but this is explained by their age and tooth wear. Their condition is still satisfactory. Fecal samples yielded a low number of strongyles. Dewormer was administered to all eight horses.

The remaining horse (Taya) was examined and is doing well considering her age and dental issues. Some evidence of diarrhea on her tail was noted. A fecal sample was examined for parasites and found to have a small number of strongyles. She was also dewormed and a bio sponge product was administered to alleviate the symptoms.

It is my opinion that these animals are receiving adequate care and nutrition at this time.
